

## PERSIST EASILY SURVIVES BOTH ROTATIONAL AND CONTINUOUS GRAZING

### Kentucky: 2005-08

In 2005 the University of Kentucky planted 5 x 15 randomized plots replicated six times in Lexington, KY. Trials include a rotational grazing study and a continuous grazing study. Persist orchardgrass was amongst the entries.

### SUMMARY:

As of the winter of 2008 Persist leads the continuous grazing trial and shares the lead in the rotational grazing trial. While the trial is small (only four commercial entries), it is worth observing that Persist appears to keep a very high percent stand, while some varieties decrease their stand over the same time period.
